Motor Shield Covers

How will a Motor Cover benefit you?

- It improves heat transfer efficiency of the cooling fins resulting in more heat being drawn off the motor.
- Snap on, durable design, lightweight.
- Up to 140% increase in airflow through cooling fins.
- No corroding or rusting.
- Stock motor sizes for easy fitment.

Motor shield covers will ensure that your valuable electric motors perform efficiently and last longer. Designed in lightweight durable materials, able to withstand wide range of material handling applications. The covers will prevent environmental debris and particles destroying bearings, windings and brushes on drive motors.

The motor covers simplify maintenance by keeping debris away from motors and improving heat transfer efficiency from the motor's cooling fins.

They are a simple solution to ensuring motor longevity by reducing bearing and winding temperatures. Proven results in hundreds of applications worldwide.
